

Stroke

Practical Guide for Clinicians

Bornstein N.M., Editor

Stroke – a major new book from Karger Publishers that brings together the very latest knowledge in stroke medicine.

Stroke is estimated to cause 5.7 million (9%) deaths worldwide. This figure is expected to rise to 7.8 million by 2030.

Stroke is the second most common cause of death worldwide and a major cause of long-term physical and emotional disability. But with tremendous progress in noninvasive diagnostic techniques in recent years and new therapeutic strategies for acute ischemic stroke, vascular neurology has become one of the most exciting and progressive fields in medicine.

With a focus on providing the essential and practical information clinicians need to know, *Stroke, Practical Guide for Clinicians* discusses every major area of this rapidly advancing field. Topics covered include:

- Identifying and treating the most common risk factors for stroke, such as hypertension, diabetes mellitus, dyslipidemia, atrial fibrillation and obesity.
- Pathophysiology and epidemiology of stroke.
- Using the latest diagnostic techniques to identify and diagnose stroke subtypes.
- New therapeutic strategies for acute stroke and transient ischemic attack.
